Spatula Match Ease Glo Inks Switch Inks Rotary Ink Additives Stainless Look Thermochromic Inks

An expression often heard around the lab is: "If we can land a man on the moon, then surely we can create new and exciting inks". Perhaps that attitude is what generated the banners over our lab door which read "FORMULATING FOR THE FUTURE". If you have special ink needs, please let us know. The moon is not really that far away! We would like to hear from you, so send those special projects to Matt Doorn, Dwight Davis, or myself, Brent Davis. 888-DECO INK (332-6465)

Brent Davis, Vice President

If you wish to be removed from our newsletter list, please call 800-348-7191

March 1, 2006

The first five people to find the hidden ink spatula  and call All or Matt with the location will receive a \$25 gift certificate to Wendy's, Friday's or Olive Garden. You will then be qualified for the grand prize drawing. The prize will be announced in the April newsletter for the drawing on December 17, 2006. One per company please. *Good Luck!*

RPM

The Ink Standard in Membrane Switch

You may ask what RPM stands for. Well...nothing in particular.

But it does represent a mixing clear that acts as a base for the — MATCH EASE —colorants seen on the right. RPM is formulated for second surface printing on polycarbonate polyester and other plastics. RPM resists attack by adhesives and is non-fogging. Its greatest use is in Membrane Switch Panels and Nameplates.

Thermochromic Inks

For plastics, paper, ceramics, glassware and metal. Promotions, anticounterfeit, temperature indicating.

Available in MetaBond, RPM, DecoRad, Astrolax, RSF, and UV Flexo

Conductives

X-90B delivers a high level of pure silver that yields a fractional ohms per square and the ultimate dependability. Call now!

MATCH EASE

Easy Blending System for UV

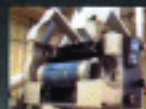

We have developed a universal blending system that will work in Free Radical UV clears. The system could be of great help to anyone who works with UV inks. Please call All below and request the detailed brochure pictured here.

GLOW IN THE DARK

Screen Inks That Will Come Alive When You Turn Out The Lights

RSF

Silicone Free Rotary Screen

If you print rotary, you must try RSF UV screen white. The results are an exceptionally smooth surface. That yields excellent trapping, whether overprinted with screen or flexo. Testimonies available if non-com.

Stainless Steel Look

Screen print SS-20X on brushed aluminum and you will be amazed. Your panel will be transformed into stainless steel. Because it is heat resistant, it can be used virtually anywhere stainless is now used. Samples are ready to send.

Unbubbleable

World Famous 2032 Bubble Breaker

works in virtually any solvent based ink. 2032 breaks bubbles instantly and promotes leveling and screen stability. *(Try it in UV too!)*

Gloss to flat- Without powder! Liquid **Gloskil** will give you the results you need without a mess. *Also helps flow and leveling!*

Printing "sharp" requires a sharp squeegee, the right angle, and an ink that knows when to stop. **Print Sharp** added to a runny ink will give you the nice, crisp image that your customers want and deserve.

This is TRULY the most versatile baking enamel on the market today. Fast curing, weatherable, flexible,

METABOND

non-yellowing and easy to use. It sticks to glass, metals, and some plastic. With catalyst, it will cure @ 160F

JUST DEVELOPED

UVHR-10 Heat Resist UV Clear
Use UVHR-10 where processing temps may reach 450 Deg. F
UV MATTE-35
Add this to your UV ink to create a satin finish.
Samples ready for immediate shipment!
